

Awarded Telescope Time

(April 26, 2026)

Observing programs across multiple facilities, including 21 accepted JWST programs (1 PI, 2 Co-PI), and others using facilities such as the NASA Infrared Telescope Facility, Gran Telescopio Canarias, and Gemini Observatory.

PI or co-PI

- 2026 **(12).** JWST Cycle 5 GO Program 11448 — 113.0 hrs (MIRI/MRS) — **Co-PI** (PI: Faherty); “A Silicate Feature Reference Library for Brown Dwarfs and Gas Giant Planets”.
- 2024 **(11).** IRTF 2024B — 21 hrs (SpeX) — **PI**; “Spectroscopic-Based Substellar Initial Mass Function of 25 Ori”.
- 2024 **(10).** JWST Cycle 3 GO Program 5474 — 20.4 hrs (MIRI/MRS) — **PI**; “Revealing New Chemistry in Dusty Extrasolar Atmospheres”.
- 2023 **(9).** IRTF 2023B — 15 hrs (SpeX) — **PI**; “Spectroscopic-Based Substellar Initial Mass Function of 25 Ori”.
- 2023 **(8).** JWST Cycle 2 Survey Program 3930 — 198.1 hrs (MIRI/LRS) — **Co-PI** (PI: Metchev); “R $\sim$ 100 MIRI 5–14 μ m Spectral Library for Brown Dwarf and Exoplanetary Science”.
- 2023 **(7).** IRTF 2023A — 9 hrs (SpeX) — **PI**; “Spectroscopic-Based Substellar Initial Mass Function of 25 Ori”.
- 2021 **(6).** IRTF 2021B — 12 hrs (SpeX) — **PI**; “Spectroscopic-Based Substellar Initial Mass Function of 25 Ori”.
- 2018 **(5).** GTC 2018B — 7 hrs (OSIRIS) — **PI**; “Towards a complete spectroscopic survey of the sub-stellar population of 25 Orionis (IV)”.
- 2016 **(4).** CT-4m 2016A — 1 hrs (DECam) — **PI**; “Toward a Complete Photometric Initial Mass Function of the 25 Orionis Group Down to Planetary Masses”.
- 2016 **(3).** SDSS — 10 hrs (APOGEE-2) — **PI**; “Towards a complete study of the 25 Ori Group”.
- 2016 **(2).** OAN-SPM 2016A — 6 nights (Echelle) — **PI**; “Spectroscopic Study of the Initial Mass Function and 3D Kinematics in the Intermediate/High Mass Range of the 25 Orionis Stellar Group (IV)”.
- 2015 **(1).** OAN-SPM 2015B — 6 nights (Echelle) — **PI**; “Spectroscopic Study of the Initial Mass Function and 3D Kinematics in the Intermediate/High Mass Range of the 25 Orionis Stellar Group (III)”.

Co-I

JWST

- 2026 **(18).** JWST Cycle 5 GO Program 10300 — 21.3 hrs (NIRSpec/BOTS, MIRI/MRS) (PI: Whiteford); “Dancing 1–28 μ m spectra to investigate the variable nature of a rogue planet”.
- 2026 **(17).** JWST Cycle 5 Survey Program 11740 (NIRSpec/PRISM/BOTS) (PI: Biller); “A variability survey of temperate brown dwarf atmospheres”.
- 2026 **(16).** JWST Cycle 5 GO Program 10963 — 13.2 hrs (NIRSpec/IFU) (PI: Baburaj); “A Glimpse into Circumbinary Planet Formation at sub-100 au scales with HD 143811 AB b”.

- 2025 **(15).** JWST Cycle 4 GO Program 7686 — 31.8 hrs (NIRSpec/BOTS) (PI: Mullens); “Brown Dwarf Broiler: Probing Chemical Quenching and Heat Redistribution in a Highly-Eccentric Brown Dwarf”.
- 2025 **(14).** JWST Cycle 4 GO Program 8441 — 176.4 hrs (NIRSpec/G395H, MIRI/MRS) (PI: Faherty); “The Cold Worlds Spectral Library”.
- 2025 **(13).** JWST Cycle 4 GO Program 7793 — 40.3 hrs (NIRSpec/G395H, MIRI/MRS) (PI: Faherty); “A Deep Dive Spectroscopic Study of an Auroral Emitting World”.
- 2024 **(12).** JWST Cycle 3 Survey Program 6005 — 213.4 hrs (NIRCam/CORON) (PI: Biller); “Imaging Young Sub-Jupiter Planets down to Solar-System Scales”.
- 2024 **(11).** JWST Cycle 3 GO Program 4967 — 27.0 hrs (NIRSpec/BOTS) (PI: Zhou); “Dwarfs of Fire and Ice: Mapping the Irradiated Atmospheres of White Dwarf-Brown Dwarf Binaries with NIRSpec PRISM Phase Curves”.
- 2024 **(10).** JWST Cycle 3 GO Program 4668 — 61.6 hrs (NIRSpec/PRISM, NIRSpec/G395H, MIRI/LRS) (PI: Burgasser); “Arcana of the Ancients: A Spectral Metallicity Survey of the Lowest-Mass Stars and Brown Dwarfs”.
- 2023 **(9).** JWST Cycle 2 GO Program 2965 — 20.9 hrs (NIRSpec/BOTS, MIRI/LRS) (PI: Biller); “Clouds or Chemistry?: Pinpointing the drivers of variability across the L/T transition via the benchmark L/T binary WISE 1049AB”.
- 2023 **(8).** JWST Cycle 2 GO Program 3548 — 8.9 hrs (NIRSpec/BOTS, MIRI/LRS) (PI: Vos; joined post-acceptance); “Exometeorology: Weather on an Isolated World Beyond Our Own”.
- 2023 **(7).** JWST Cycle 2 GO Program 3486 — 9.7 hrs (NIRSpec/PRISM, MIRI/LRS) (PI: Vos); “Equator-to-Pole Atmospheric Differences in Giant Exoplanet Analogs”.
- 2023 **(6).** JWST Cycle 2 GO Program 3558 — 8.4 hrs (NIRSpec/PRISM, MIRI/LRS) (PI: Meisner; joined post-acceptance); “The First Spectrum of the Coldest Halo Brown Dwarf”.
- 2023 **(5).** JWST Cycle 2 GO Program 3670 — 25.5 hrs (NIRSpec/PRISM, MIRI/LRS) (PI: Burningham; joined post-acceptance); “Sinking silicates: tracing rainout across the LT transition”.
- 2023 **(4).** JWST Cycle 2 GO Program 3375 — 27.9 hrs (NIRSpec/PRISM BOTS, NIRSpec/G395H BOTS, MIRI/MRS TSO) (PI: Whiteford; joined post-acceptance); “Dancing 1 - 14 micron spectra to solve the cloudy and chemical puzzle of brown dwarf variability”.
- 2022 **(3).** JWST Cycle 1 GO Program 2327 — 14.0 hrs (NIRSpec/BOTS) (PI: Skemer; joined post-acceptance); “Water Ice Clouds and Weather on the Coldest Brown Dwarf”.
- 2022 **(2).** JWST Cycle 1 GO Program 2124 — 26.1 hrs (NIRSpec/G395H, MIRI/Imaging) (PI: Faherty; joined post-acceptance); “Explaining the Diversity of Cold Worlds”.
- 2022 **(1).** JWST Cycle 1 ERS Program 1386 — 76.8 hrs (NIRCam/CORON, MIRI/CORON, NIRISS/AMI, NIRSpec/IFU, MIRI/MRS) (PI: Hinkley; joined post-acceptance); “High Contrast Imaging of Exoplanets and Exoplanetary Systems with JWST”.

Other Telescopes

- 2026 **(15).** Gemini North 2026A — 14.0 hrs (IGRINS-2) (PI: Oliveros-Gomez); “The effect of viewing geometry on the appearance of L and T brown dwarfs”.
- 2026 **(14).** Gemini South 2026A — 18.3 hrs (IGRINS-2) (PI: Zhang); “Building a Legacy Library of Brown Dwarfs: Gemini Near-IR Spectroscopy of JWST MIRI-only Targets”.

- 2026 **(13).** Gemini South 2026A — 3.6 hrs (IGRINS-2) (PI: Zhang); “Building a Legacy Library of Brown Dwarfs: Gemini Near-IR Spectroscopy of JWST MIRI-only Targets”.
- 2023 **(12).** GTC 2023B — 7 hrs (OSIRIS) (PI: Román-Zúñiga); “Towards a complete spectroscopic survey of the sub-stellar population of 25 Ori (VI)”.
- 2022 **(11).** GTC 2022B — 9 hrs (EMIR) (PI: Román-Zúñiga); “Substellar population in IC1396”.
- 2020 **(10).** Gemini North, Gemini South 2020B — 22.4 hrs (GNIRS, IGRINS) (PI: Tannock); “Ultra Cool Dwarfs Viewed Equator-on: Seeking the Best Hosts for Biosignature Detection in Transiting Exoplanets”.
- 2019 **(9).** GTC 2019B — 7 hrs (OSIRIS) (PI: Román-Zúñiga); “Towards a complete spectroscopic survey of the sub-stellar population of 25 Ori (V)”.
- 2018 **(8).** MMT 2018B — 1 nights (Hectospec) (PI: Kim); “The Spectroscopic Initial Mass Function of a Young Star Cluster that Just Evolved from its Parental Cloud (III)”.
- 2017 **(7).** MMT 2017B — 1 nights (Hectospec) (PI: Kim); “The Spectroscopic Initial Mass Function of a Young Star Cluster that Just Evolved from its Parental Cloud (II)”.
- 2017 **(6).** GTC 2017B — 7 hrs (OSIRIS) (PI: Román-Zúñiga); “Towards a complete spectroscopic survey of the sub-stellar population of 25 Orionis (III)”.
- 2016 **(5).** MMT 2016B — 1 nights (Hectospec) (PI: Kim); “The Spectroscopic Initial Mass Function of a Young Star Cluster that Just Evolved from its Parental Cloud (I)”.
- 2016 **(4).** GTC 2016B — 6.8 hrs (OSIRIS) (PI: Román-Zúñiga); “Towards a complete spectroscopic survey of the sub-stellar population of 25 Orionis (II)”.
- 2016 **(3).** GTC 2016B — 6.8 hrs (OSIRIS) (PI: Downes); “Towards a complete spectroscopic survey of the sub-stellar population of 25 Orionis (I)”.
- 2015 **(2).** OAN-SPM 2015A — 6 nights (Echelle) (PI: Downes); “Spectroscopic Study of the Initial Mass Function and 3D Kinematics in the Intermediate/High Mass Range of the 25 Orionis Stellar Group (II)”.
- 2014 **(1).** OAN-SPM 2015B — 6 nights (Echelle) (PI: Downes); “Spectroscopic Study of the Initial Mass Function and 3D Kinematics in the Intermediate/High Mass Range of the 25 Orionis Stellar Group (I)”.
